- a. The cost of water purchased from Metropolitan Water District through Municipal Water District of Orange County.
 - b. The cost of water purchased from California Domestic company including commodity charges, stock assessments (on both owner and leased shares), water lease, expense over entitlement charges and all other costs.
 - c. The cost of ground water production including utility charges, depreciation on wells and equipment, financing costs, operational costs and all other costs of producing groundwater.
 - d. The sum of costs from items a,b and c divided by the total acre feet of water purchased and/or produced, to compute an average cost per acre foot of water.
2. The resultant cost of water, as determined above, as compared to a similar computation for the preceding fiscal year, before a commodity index.
 3. The commodity index, as determined above, shall be applied to the commodity rate established in Section A, paragraph 3(a) (or as established by this formula for subsequent years) to establish a new commodity rate to become effective the next succeeding October 1.
 4. The commodity index, as determined above, shall likewise be applied to the "water value" portion of the minimum monthly rate as established in Section A, paragraph 1 in the same manner, effective the next succeeding October 1.
 5. Such rate modifications as may be calculated in 3 and 4 above shall be made to the nearest one cent (\$0.01).
 6. The "Readiness to serve" portion of the minimum charge as established in Section 3
